

Re-opening the World

Life after COVID-19

For **personal mobility**, we will see after COVID-19 that...

Use of bicycles, e-bikes, e-skateboards and e-scooters will increase thanks to dedicated bike lanes being built in cities all over the world

'Smart face masks' will be available which show if a person with COVID symptoms sneezes nearby

Use of car-share schemes will increase as car ownership continues to decrease

Road travel will return to normal levels although commuting times and 'rush hours' may change

These predictions come from Futurologist Ray Hammond, commissioned by Allianz Partners to look at how the world may be in 2021.
