Philips and Allianz Worldwide Partners launch connected health solution and services in Germany

Philips personal health programs include a combination of connected health measurement devices, app-based health programs and personal coaching*

Amsterdam, The Netherlands – [Royal Philips](#) (NYSE: PHG; AEX: PHIA) and [Allianz Worldwide Partners](#) entered a partnership focusing on connected health solutions and services in Germany. The personal health programs* are designed for and tailored to motivate people to make healthy choices in their lifestyle, as active health management is necessary to stem the rising tide of chronic diseases. The health programs leverage Philips' deep healthcare and consumer expertise are offered across employers as an instrument for occupational health, insurers and consumers.

“With ageing populations and in some cases poor lifestyle choices, the risk of chronic diseases are ever increasing, with significant impacts on the individuals and on the healthcare system,” said Caroline Clarke, CEO Population Health Management at Philips. “We want to help people take more control over their health.”

Participants in the Philips personal health programs receive one or more devices, a smart phone app, digital content, and regular coaching sessions from Allianz Global Assistance, the German entity of Allianz Worldwide Partners. These coaching calls are conducted by a healthcare professional, such as a doctor, a nutritionist or a physiologist depending on the program. The healthcare professionals give participants the chance to get more insight into their lifestyle and get personal advice and help change their habits.

“Our multi-modal prevention programs combine modern Philips technology and digital know how with personalized coaching programs and aim at sustainable lifestyle change in the fields of nutrition, exercise and stress management, which are widely accepted as the key to prevent chronic diseases,” said Dr. Steffen Krotzsch, Head of Innovation, Allianz Worldwide Partners. “The coaching adds the personal touch, education on medical topics and friendly reminders to sustain the improved lifestyle.”

The health measurement devices that gather information for the Philips personal health programs are all Bluetooth enabled, connecting wirelessly to the Philips HealthSuite Health app so users can conveniently track their measurements over time. They form part of Philips' connected health propositions that all link through the Philips HealthSuite digital platform, an open and secure platform that collects and analyzes health and other data from multiple devices and sources. The health measurement devices used for the programs include:

- **The Philips Health band** – empowers you to live a healthier life by tracking your activity, heart rate and sleep

- **The Philips wrist blood pressure monitor** – a compact and easy-to-carry device that allows you to measure your systolic & diastolic blood pressure as well as your heart rate. Is rechargeable via USB.
- **The Philips body analysis scale** – an elegant device that measures weight, estimates body fat through Bio-Impedance Analysis, and calculates BMI. Supports the entire family with up to eight user profiles.

**The Philips health programs and health measurement devices are not currently available for sale in the USA.*
